## What extensions are in the public JSI search ?

Posted by richr - 2008/01/04 15:20

---

Any extension file with an 'open download'.

This means there is no login or approval of license agreement screen needed.

There are also some extensions used for download areas that have options to specifically take measures to prevent automated downloads. You should complain to your extension vendors to turn these features off if you can't download the extension you want using the JSI.
